what's new for your outdoor room!

Outdoor fireplaces

Natural gas outdoor fireplaces bring beauty to your backyard without the maintenance required of a traditional wood-burning fireplace. Firing up immediately, natural gas outdoor fireplaces create instant ambiance. Innovative and versatile, outdoor fireplaces can be built to achieve the appearance of a masonry wood-burning fireplace. They are also constructed to withstand the outdoor elements and add a touch of elegance to your outdoor living room.

Natural gas fire pits, fire rings and patio campfires

Natural gas fire pits, fire rings and patio campfires may vary a little, but these names are often used to describe a pit, bowl or ring of fire that is in the ground or low to the ground.

Fire pits may use a traditional circle or "ring" shape or can be customized to fit any shape of land or design you can imagine. Some fire pits may use a disk-shaped container that can hold different elements to transfer heat. Some of these elements include volcanic sand, stones, lava rocks, river rock and traditional ceramic logs. This type of fire pit will certainly make your outdoor living room unique. Fire pits can be installed to be the focal point of your outdoor living room where friends and family gather, or to create an entertainment or meditative area.

Patio type campfires are usually pre-manufactured and can be placed right on your patio or deck. Just dim the patio lights, turn on your campfire, grab a bag of marshmallows and start making memories. Most manufacturers provide several options for the patio fire base, so you can create a look to match your patio or deck.
